
Deployment Instructions **USE IN EMERGENCY ONLY.**

Shut the door and open the window to its widest.

Pull the front section of the box away from the wall, keep this tilted back towards you and throw horizontally out of the window.

The ladder has been specially packed to un-roll.

Check out of the window to make sure the ladder has deployed correctly, then descend.

Remember: This fire escape ladder has been designed to safely carry two or three people at once (depending on the ladder length). Small children may require help descending the ladder.

Please Note: This Fire Escape Ladder is for emergency use only. Do not open the container unless there is an emergency. Once the ladder has fallen out of the container it cannot be re-positioned in the box without a re-packing jig. Opening the container other than in an emergency, results in the warranty for the product becoming invalid. Should you open the container involuntarily, please return the ladder for re-packing. There will be a small charge for this service.
